

What is claimed is:

1. A multiple socket having rotatable socket units comprising:
a housing having a first conducting strap and a second conducting
strap at an interior thereof; and
5 socket units, with each being pivotally connected at the housing and
capable of pivotal rotations, and having a first insertion strap and a
second insertion strap at an interior thereof, wherein the first insertion
strap and the second insertion strap are pivotally connected with the
first conducting strap and the second conducting strap, thereby
10 enabling the socket unit to drive the first insertion strap and the
second insertion strap to further freely rotate relative to the housing.
2. The multiple socket having rotatable socket units in accordance with
claim 1, wherein the first conducting strap and the second conducting
strap are provided with projecting pivotal ends for pivotally connecting
15 ends of the first insertion strap and the second insertion strap.
3. The multiple socket having rotatable socket units in accordance with
claim 1, wherein the socket unit has apertures at two rear sides
thereof for receiving the pivotal ends of the first conducting strap and
the second conducting strap.
